See what's happening
in real-time at your store
from your home computer!

Why JCS eGuard?

There has been a giant leap in technology that provides a management and security tool as vital to your business as your loupe. The JCS eGuard system is software driven, affordable, and easy to use.

With JCS eGuard you can view the activity caught by any camera at your store in real time from any off-site computer using the internet. JCS eGuard even supports the use of a PDA. With these viewing options you can do more than catch a thief or locate a piece of missing inventory. You can see how your employees conduct themselves when you aren't there. This is a truly invaluable benefit.

Prior to this new digital technology, VCR systems were your only option. There is no comparison between the two:

- Changing video tapes is time-consuming. With JCS eGuard, there are no tapes to change.
- If you need to locate a specific event with a VCR system you spend a great deal of time trying to rewind and play the tape to the correct spot. With JCS eGuard you can view any minute of any day by merely clicking on the day and time you want to view. And, you can review in fast or slow motion.
- VCR tapes are poor quality. JCS eGuard images range from high to movie quality depending on your system configuration.
- An added bonus is that the audio capability of JCS eGuard allows you to use the system for video conferencing too.

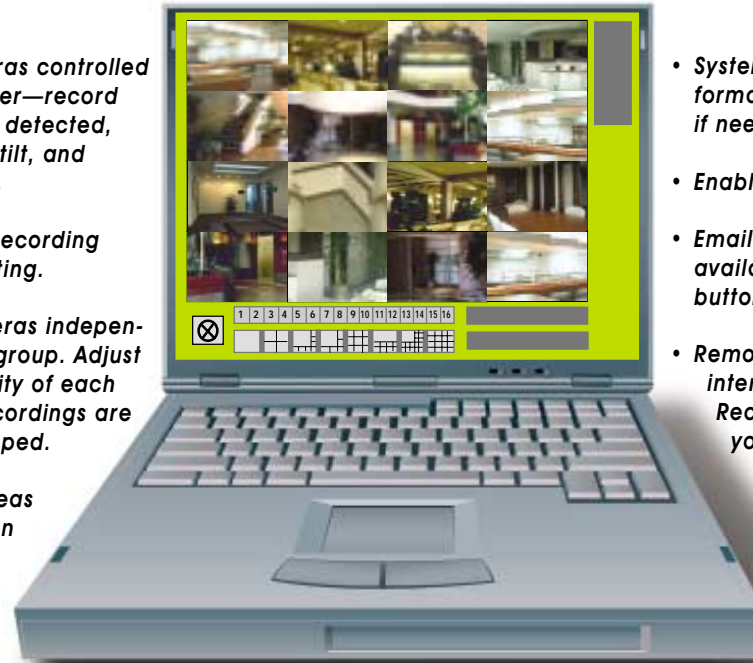

At Jewelry Computer Systems we have been providing software solutions for jewelers for over 18 years. JCS eGuard is our newest offering. We will customize a system to fit your security and budget needs. Systems start at \$2,295. Financing is available.

Use a PDA to view any camera in your store. By touching a switch on the PDA, you can select any camera.

Overview of Features

- **Up to 16 cameras controlled by one computer—record when motion is detected, including pan, tilt, and zoom cameras.**
- **Up to 30 days recording before overwriting.**
- **Schedule cameras independently or as a group. Adjust recording quality of each camera. All recordings are date/time stamped.**
- **Select "hot" areas for recording on motion. Sensitivity can be adjusted.**
- **Instantly review any minute of any day.**

Picture of 16 camera views on one screen. Select any camera to observe, or view any group as desired by clicking on the grids at the bottom of the screen.

- **System senses computer performance and auto reboots, if needed.**
- **Enable alarms and record audio.**
- **Email, phone, or pager alerts available if alarms sound. Panic button alert available.**
- **Remote viewing from off-site via internet from computer or PDA. Record on remote computer if you see suspicious activity. (In addition to the automatic system recording).**
- **Remote viewing password protected.**
- **Installation and training.**
- **Video conferencing.**
- **NO MORE VCR TAPES!**
